PROJECTS:

EchoCollect(Feedback Collection App)

Technologies Used: JavaScript , CSS , HTML

- Collaborated on a **team project** to develop a feedback collection system. Contributed to the front-end development using HTML, CSS, and JavaScript to create user-friendly interfaces for submitting feedback
- Developed a feedback system that allows users to submit feedback and admins to view and export data as a CSV file, implementing role-based authentication for secure access.

FomoFeed(Social Media Application)

Technologies Used: JavaScript , CSS , HTML

- It is a **team project** , Implemented front-end functionalities for user authentication (login, register, logout).
- Designed and developed UI for uploading posts (videos, photos, updates).
- Enabled interactive features such as liking and commenting on posts.

Ticket Management System(Simplify Support, Elevate Customer Satisfaction.)

Technologies Used: JavaScript , CSS , HTML

- It is an **individual project** , This project is made to create, update, and resolve the customer's issues related to the tickets.
- Simplified the process of managing tasks or issues by keeping track of Individual customer's progress, and enhanced my project by providing a User-friendly Interface.
- The main Outcome of this project is to boost productivity and provide better services to the customers
